PEORIA COUNTY - Solid Waste Disposal
Peoria/Janson

The Honorable Robert S. Calkins
State's Attorney
Peoria County Court House
Peoria, Illinois 61604

Dear Sir:

This is in response to Assistant State's Attorney Williams' recent request for a list of items which must be satisfied in order that the Janson dump can comply with the State Refuse Disposal Law and this Department's Rules and Regulations for Refuse Disposal Sites and Facilities.

The following items should be completed immediately:

1. Remove all junk cars from the site.
2. Cover all existing refuse with two feet of earth.
3. No further refuse may be accepted at the site until the site has full approval from this Department for the operation of a sanitary landfill.
4. No open burning is permitted.
5. The site must be adequately fenced with suitable access gate which can be locked.
6. Assure this Department that sufficient cover material is available and will be made readily available at the site.
7. A suitable plan of operation must be submitted and approved by this Department including all items contained in Rule 4.01 of the Rules and Regulations for Refuse Disposal Sites and Facilities.

A representative of this Department will reinspect the site on October 23 to determine compliance with the above items.

Any future use of the site for the disposal of refuse will require compliance with the following additional items:

8. The site must be fully protected against flooding. This would involve a properly engineered and properly constructed dike on all sides where the water might come in. The dike would need to be at least two feet above maximum flood level.
9. Pumps of sufficient capacity must be provided behind the levee to prevent any flooding of the area where refuse has been deposited. However, no pumping to the creek will be permitted until this Department has been assured that the discharge will meet the water quality standards of the Sanitary Water Board.
10. No refuse may be deposited in water.
11. All operations must be kept back at least 50 feet from the bank of the creek or any drainage ditch.
12. Access road must be improved.
13. All dumping must be properly supervised at all times.
14. Suitable equipment must be available at the site at all times to insure proper operation of the site.
15. All new refuse brought in to the site must be covered with six inches of earth every day. All refuse must be compacted before covering.
16. No hazardous chemicals, liquids, or other hazardous materials may be accepted at the site.
17. No scavenging may be permitted at the site.
18. No salvage operations may be permitted at the site unless the items in Rule 5.11 are complied with.
19. Suitable shelter facilities must be provided for the operator.
20. Final cover of at least two feet of earth must be placed over all finished areas.
21. All other requirements of the Rules and Regulations for Refuse Disposal Sites and Facilities of the Department not covered above must be complied with.

We are enclosing copies of the Refuse Disposal Law and Rules and Regulations for Refuse Disposal Sites and Facilities.

Should you have any questions regarding any of the above, please contact this office.

Very truly yours,

ILLINOIS DEPARTMENT OF PUBLIC HEALTH

Franklin D. Eder
